

# More About Water Purifying

One of several available stainless steel filter units, is shown above.

Berkey Water Filtration Systems are the ultimate in portable water contamination removal. Used worldwide, they set the standard for filters used in normal or hostile filtration environments to provide the best tasting, sparkling clean drinking water possible.

The Berkey water filter is so powerful it is classified as a water purifier and can be used to filter non-potable or unhealthy water in situations, where electricity and pressure are not available. For normal, everyday situations or for challenging water filtration environments like rivers and lakes, Berkey is the most flexible and adaptable filtering system available. Costing just pennies a

day to operate it provides an economical, reliable, user friendly and powerful filtration solution for water quality that cannot be equaled. Berkey is trusted around the world by many international relief organizations to provide emergency drinking water to workers and citizens during times of crisis or disaster.

This Berkey water filter system is so revolutionary that it removes viruses to purification standards, pathogenic bacteria, cysts and parasites to non detectable levels, harmful or unwanted chemicals to below detectable levels, and reduces toxic heavy metals, such as lead and mercury, without removing the healthful and nutritional minerals needed to support a healthy body. Compare these Berkey features and see for yourself why Berkey dominates the portable water filter industry.

Berkey Stainless Steel Water Filtration Systems:

Gravity flow filter design needs no water pressure or electricity.

2-1/2 gallon lower storage chamber

Water, water, everywhere but not a drop to drink — a cliché once referred to floating in the ocean on a life raft. Today, this can be said about most of our water, if you are the least bit concerned about your health.

Agricultural fertilizers and herbicide have been used to such an extent that a lot of ground water contains harmful traces of these poisons. All too many cities have fluoride added to the tap water, forcing the unaware to drink this poison with the promise of reducing tooth cavities!

Therefore, you'll find more and more homes using a Berkey filter such as shown in this article. Regardless of the source, they are taking no chances with the water they choose to drink, cook and bath with.

You might consider buying more than one — one to use now and more for emergency usage.

Additional filters can be added that are designed to remove the fluoride that our wonderful government has added to our drinking water.

Berkey filters, etc are available from their website, [efoodsdirect.com](http://efoodsdirect.com) or Amazon.com

Efoodsdirect.com will include a Berkey light unit for only \$100.00 when included with a year food unit.

Order extra filter elements and any spare parts you might think you should have — The valve is a good example. A spare might be a good idea.
